CAMBRIDGE
PSYCHOLOGY RESEARCH
ETHICS COMMITTEE

24 June 2020

Application No: PRE.2020.053

Dear Professor Robbins

Enhanced habit system and impaired goal-directed behaviour: an online study

The Cambridge Psychology Research Ethics Committee has given ethical approval to your research project: *Enhanced habit system and impaired goal-directed behaviour: an online study* as set out in your application submitted on 22 April 2020.

The Committee attaches certain standard conditions to all ethical approvals. These are:

- (a) that if the staff conducting the research should change, any new staff should read the application submitted to the Committee for ethical approval and this letter (and any subsequent letter concerning this application for ethical approval). An amendment request should also be submitted (guidance at www.bio.cam.ac.uk/psyres/amendments);
- (b) that if the procedures used in the research project should change or the project itself should be changed, you should consider whether it is necessary to submit a further application for any modified or additional procedures to be approved;
- (c) that if the employment or departmental affiliation of the staff should change, you should notify us of that fact.

Members of the Committee also ask that you inform them should you encounter any unexpected ethical issues.

Ethical approval will expire 30 September 2021. If you require an extension, please submit an amendment request before the expiry date (guidance here: <https://www.bio.cam.ac.uk/psyres/amendments>).

If you would let us know that you are able to accept these conditions, we will record that you have been given ethical approval.

Please note that there have been changes to the procedures regarding amendments. Full details are given on the REC website.

Yours sincerely

M Bodfish
