

## Volunteers aged 18-55 years needed to help us understand OCD therapy

We need **volunteers** to take part in a study looking at why **obsessive-compulsive disorder (OCD)** therapy works or fails. Participants will be asked to complete questionnaires, interviews and play computerized games. Knowing the brain causes of why OCD therapy does not work for everyone will ultimately help us improve treatment outcomes. You will receive **£8.50/hr** as compensation.

We need volunteers who are:

- ✓ Diagnosed with obsessive-compulsive disorder (OCD)
- ✓ Aged 18-55
- ✓ Fluent in written and spoken English
- ✓ Normal/corrected to normal vision
- ✓ Starting OCD therapy soon
- ✗ Not suffering from: autism spectrum disorder, psychosis, schizophrenia, bipolar, hoarding, tic or Tourette disorder
- ✗ Not suffering from any ear-related conditions: tinnitus, ear inflammation, hearing sensitivity, hearing loss, use of hearing aids
- ✗ Colour blindness
- ✗ Severe learning disabilities

*Interested?* Contact the research team via 07572 136 885 or [k.hoang@ucl.ac.uk](mailto:k.hoang@ucl.ac.uk) (Karen Hoang) or [t.seow@ucl.ac.uk](mailto:t.seow@ucl.ac.uk) (Dr Tricia Seow) and we will send further details and explain the study over email/phone.
