

Volunteers aged 18-55 years needed to help us understand obsessions in OCD

We need **volunteers** to take part in a study looking at how obsessions arise in **obsessive-compulsive disorder (OCD)**. Participants will be asked to complete questionnaires, interviews, play computerized games and undergo a brain scan. Knowing how distressing intrusive thoughts manifest will ultimately help us improve our understanding of OCD. You will receive **£8.50/hr** as compensation.

We need volunteers who are:

- ✓ Diagnosed with obsessive-compulsive disorder (OCD)
- ✓ Aged 18-55
- ✓ Fluent in written and spoken English
- ✓ Normal/corrected to normal vision
- ✗ Not suffering from: autism spectrum disorder, psychosis, schizophrenia, bipolar, hoarding, tic or Tourette disorder
- ✗ Not taking antipsychotic medication
- ✗ Free of metal implants or dental braces
- ✗ Not pregnant
- ✗ Colour blindness
- ✗ Severe learning disabilities

Interested? Contact the research team via 07572 136 885 or k.hoang@ucl.ac.uk (Karen Hoang) or t.seow@ucl.ac.uk (Dr Tricia Seow) and we will send further details and explain the study over email/phone.
